

Enabling Legacy PBXs for SIP Trunk Savings

- Are you paying too much for Your phone bill?
- Immediate savings of 40% or more off your current monthly phone
- Businesses easily save thousands of dollars per year while increasing productivity!

You've heard of businesses saving lots of money by using VoIP

Perhaps you've discussed this with your "phone guy". Most likely it's been explained that your PBX either will not support this technology or it will, but for a very costly upgrade, including new proprietary handsets and a wiring infrastructure upgrade to work with this technology.

LegacySIP

LegacySIP Gateways provide a radical alternative to VoIP migration by removing the cost and complexity

With the LegacySIP VoIP Gateway businesses retain their existing infrastructure and telephones while gaining all the cost savings and productivity enhancements of IP telephony

Immediate 40% +plus savings vs. traditional PRIs without costs associated with typical "rip and replace" VoIP migration solutions such as network upgrades, all new handsets or retraining

Supports all PBXs currently using PRIs

Maximize the use and value of your Internet connection

Make free calls between locations, bypassing the PSTN for internal calls

Continued return on existing PBX investments by leveraging existing equipment and infrastructure

With the LegacySIP Gateway depreciation of your infrastructure is not accelerated

LegacySIP gateways connect you to our services for

- ◆ Local, long-distance and international calling
- ◆ National number coverage
- ◆ Toll-free numbers
- ◆ E911
- ◆ Disaster recovery routing
- ◆ Flexible billing plans

At LegacySIP we're passionate about what we do

Enabling Legacy PBXs for SIP Trunk Savings

LSA VoIP Gateways

Solid-state with no moving parts in order to ensure the utmost reliability

Designed for PBXs not currently able to use SIP trunks

Replace traditional PRI circuits

Maximize the use and efficiency of your Internet connection

Do not need **any** modifications, upgrades and/or changes to your current PBX, phones or wiring unlike other solutions

Designed to automatically install and connect without user intervention

Installation is plug-and-play and takes less than 30 minutes

Convert voice and fax calls, in real time, between your PBX and our telephone network

Support 23 up to 276 concurrent voice channels depending on the model you choose.

The LegacySIP VoIP Gateway interoperates with more than 100 PBX types, including Avaya, Ericsson, NEC, Nortel, Panasonic, Samsung, Comdial and Toshiba
